PROFESSIONAL SUMMARY

Full-Stack Web Developer with approximately 2 years of experience building web applications and business-focused systems with Laravel, PHP, MySQL, Blade, Bootstrap, and JavaScript. Experienced across database design, backend development, responsive frontend implementation, and delivery of complete applications. Seeking a developer role contributing to real-world products while continuing to expand technical expertise.

TECHNICAL SKILLS

Backend: PHP, Laravel, Laravel Eloquent, MVC, authentication and authorization, REST APIs

Frontend: HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX, Blade, responsive web development

Database: MySQL, relational database design, database relationships, migrations

Tools & Deployment: Git, GitHub, Composer, NPM, Vite, XAMPP, cPanel, DNS, SSL, web hosting, application deployment

PROFESSIONAL EXPERIENCE

Contract Web Developer | 2023 - 2025 | Approximately 2 years

Independent Development Work through Freelance Contractor

- Delivered paid web projects assigned through another freelance developer, working independently from implementation through delivery.
- Built backend functionality, relational database structures, and responsive frontend interfaces based on project requirements.
- Converted provided designs and templates into functional websites and web applications using PHP, MySQL, HTML, CSS, Bootstrap, and JavaScript.

Web Development Training & Internship | 2023 - 2024 | 7 months

Violet Pro - Tyre, Lebanon

- Completed 4 months of web development training followed by a 3-month practical internship.
- Built full-stack applications using PHP, MySQL, HTML, CSS, Bootstrap, JavaScript, jQuery, and AJAX.
- Designed relational databases, implemented backend logic, and developed administrative and management interfaces.
- Worked independently on portfolio, project-management, ecommerce, and offline wedding-planning applications; continued improving selected projects after training.

SELECTED PROJECTS

my-ecommerce | Laravel Ecommerce Platform | Personal Project

Reusable bilingual English/Arabic ecommerce platform built from the ground up with Laravel, MySQL, Blade, Bootstrap, and JavaScript; includes RTL support and an administrative interface.

Designed the application architecture and relational database independently.

Implemented simple, configurable, and bundle products; categories, attributes, variants, inventory, customer accounts, addresses, wishlists, reviews, coupons, notifications, localization, and store settings.

Added tax-aware B2B/B2C pricing, special pricing, and product relationships; adapted a free frontend template to the custom Laravel backend.

Version 1.1 completed and prepared for deployment as a live portfolio demonstration.

Delivery Financial Management System | Laravel | Client Project

Custom financial and operational system created for a delivery company to replace paper calculations and difficult-to-maintain Excel records.

Analyzed the existing order, driver, settlement, and profit workflow, then independently designed the database, architecture, backend, and interface.

Implemented drivers, orders, settlements, collections, business partners, financial transactions, reporting, and operational tracking.

Automated company and driver profit calculations using the client's existing business rules; completed and available as a live demonstration.

Pharmacy Inventory & Expiry Management System | Confidential Client

Developed a custom inventory management system for a pharmacy that was experiencing financial losses due to medications expiring before being sold.

- Implemented batch-level inventory tracking with individual expiry dates and quantities.
- Developed **FEFO (First Expired, First Out)** logic to prioritize products with the earliest expiry date.
- Automated stock selection so pharmacists can identify which batch should be retrieved or sold first.
- Improved inventory visibility and reduced the risk of medication being overlooked until expiration.
- Designed the system around the pharmacy's real-world inventory workflow.

Auto Parts Inventory & Transaction Management System | Confidential Client

Developed a transaction and inventory management system for an auto parts business that required better control and traceability of sales and product returns.

- Redesigned the refund workflow to record **refunds as separate transactions** instead of modifying or deleting the original sale.
- Linked refund transactions to their original sales to maintain a complete and traceable transaction history.
- Preserved original sales records while accurately reversing returned quantities and amounts.
- Improved auditability of inventory and financial movements.
- Designed the transaction logic to make sales, returns, and inventory changes easier to review and investigate.

my-manager | Laravel Freelance Work Management System | Personal Project

Business organization system designed to centralize the information needed to manage freelance web-development work.

Designed and developed the complete Laravel/MySQL application and responsive interface independently.

Centralized projects, tasks, payments, expenses, accounts, hosting services, domains, and subscriptions to reduce lost information and missed renewals.

Implemented authentication and role/permission management; completed and available for deployment as a live demonstration.

EDUCATION

LT - Information Technology | 2023

LT - Information Technology | 2020-2021

Al Amjad Institute - Jal El Baher, Lebanon | Graduated

LANGUAGES & AVAILABILITY

Languages: Arabic (Native) | English (Intermediate; good reading proficiency)

Availability: Immediately available for on-site, hybrid, or remote opportunities.
